# Task2: CLOUD MONITORING AND ALERTS

AIM: SET UP MONITORING FOR A CLOUD- BASED APPLICATION USING AWS CLOUDWATCH.
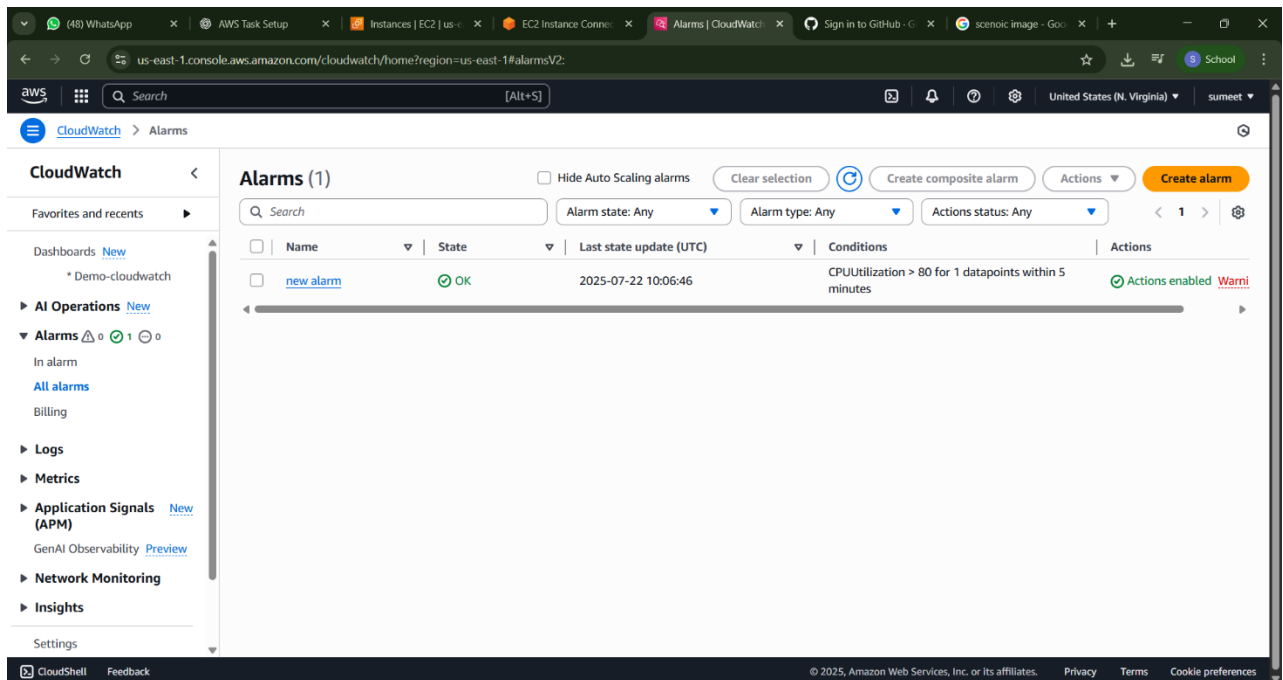

- Created a dashboard in AWS CloudWatch

- Dashboard I created with associated to EC2

- Created Alarm (a cloudwatch feature) with metrics of CPU utilization of EC2 and set the threshold 80 so that the if CPU hit 80% of its capacity then the SNS notification will be send to users email.

- Graph of the metric I set for CPU utilization.
